

WORKTIME®
RESPECTFUL EMPLOYEE MONITORING

Case Study

Better Time Sheets Are Now Built

“We allow our developers to work from home. The only condition: they have to monitor their work, for self-control, mostly, and to have some data for the time sheets.” – says the IT department manager.

Industry

Mass Media

Country

USA

Size

2,500 Employees

Issue/Challenge

Working from home employees monitoring, building timesheets

Solution

WorkTime Corporate

Result

Employees awareness increased, better timesheets built

OVERVIEW

For more than a year WorkTime has been successfully used by the IT department of an internationally known mass media company (USA). WorkTime was used mostly to help the employees build their time sheets, since the majority of them are allowed to work from home, using company laptops. WorkTime successfully serves this purpose. Number of monitored employees: 2,500

CHALLENGE

While some of the employees work in the office, a number of them work from home, using company laptops. The supervisors of the IT department wanted to allow for a flexible working environment, while maintaining productivity levels, especially for employees working remotely.

SOLUTION

In order to maintain high productivity levels in these more flexible circumstances, it was suggested that each employee create time sheets based on WorkTime monitoring results. The employees were granted a measure of control over the software, in that each had access to his or her own reports, and each employee could start and stop the monitoring program. Employees working at home could monitor their laptops as needed for their work, or they could stop the monitoring.

RESULT

Using WorkTime, the IT department of the mass media company was able to maintain high productivity levels without losing the comfortable work environment and its flexible conditions. Employees with the help of WorkTime reports can build the time sheets easier, since now there is no need to remember all the work that was done during the week.

ABOUT WorkTime

WorkTime is computer monitoring software that monitors software and websites usage, as well as logins and logouts, active and idle times during work hours. Reports on the results of such monitoring processes could be used to create better time sheets.

ABOUT NesterSoft Inc.

Since 1998 NesterSoft Inc. has been offering computer monitoring software that respects the privacy of employees.
