

**WORKTIME**®  
RESPECTFUL EMPLOYEE MONITORING

## Case Study

# WorkTime Saves \$7,500 per Employee per Year

**“WorkTime helped us to save approximately \$7,500 per employee per year!” – says the company’s director**

**Industry**

Rescue Medical Services

**Country**

Canada

**Size**

20 Employees

**Issue/Challenge**

Avoid Overcharges by Remote Employees

**Solution**

WorkTime Corporate

**Result**

Money Saved

**OVERVIEW**

WorkTime is being successfully used by a Canadian rescue medical services company, which has remotely and in-office working employees. The main purpose of monitoring was to find out how much time employees (especially remote ones) actually spend working in order to avoid overcharges.

Amount of Monitored Employees: 20

According to feedback from the director of the company, WorkTime helped to save approximately \$7,500 per employee per year.

**CONCERN**

Company’s management was concerned about being overcharged by the employees, especially by remote ones.

**DECISION TO MONITOR EMPLOYEES**

Considering how much money is spent on salaries in comparison to WorkTime licenses cost, company’s management decided to apply employee computer monitoring in order to minimize money waste due to overcharge.

**SOLUTION**

When the company had started monitoring employees’ productivity using WorkTime, the management found significant issues with employee attendance and Internet use. A lot of employees (especially remote ones) were overcharging the company. Some employees were declaring a few working hours more per day than it actually was. The discrepancy between the reported timesheets and WorkTime reports was approximately \$7,500 per employee per year, which is about \$150,000 per year.

**RESULT**

Company’s management made a decision to disclosure monitoring results to the employees. It helped to build better timesheets and increase productivity. As a result it saved a lot of money for the company.

**ABOUT WorkTime**

WorkTime is a productivity computer monitoring. WorkTime offers respectful productivity monitoring without infringing on personal privacy.
